-1. FUNCTION: NEUROPFILAMENTS USUALLY CONTAIN THREE IF PROTEINS: L, M, AND H WHICH ARE INVOLVED IN THE MAINTENANCE OF NEURONAL CALIBER.

-1. DOMAIN: THE EXTRA MASS AND HIGH CHARGE DENSITY THAT DISTINGUISH THE NEUROFILAMENT PROTEINS FROM ALL OTHER INTERMEDIATE FILAMENT PROTEINS FROM ALL OTHER INTERMEDIATE FILAMENT PROTEINS ARE DUE TO THE TAILDIECE EXTENSIONS. THIS REGION MAY FORM A CHARGED SCAFFOLDING STRUCTURE SUITABLE FOR INTERACTION WITH OTHER NEURONAL COMPONENTS OR IONS.

-1. MISCELLANGOUS: NF. L IS THE MOST ABUNDANT OF THE THREE NEURORIALAMENT PROTEINS AND, AS THE OTHER NOMEPLITHELIAL INTERMEDIATE FILAMENT PROTEINS, IT CAN FORM HOMOPOLYMERIC 10-NM

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     -!- FUNCTION: Binds the telomeric double-stranded TTAGGG repeat and negatively regulates telomere length. Involved in the regulation Essential for cell growth. May regulate gene expression. -!- SUBGUNIT: Homodimer (Probable).
                                                                                                                                                                                                                                                                                                                  Brigati C., Kurtz S., Balderes D., Vidali G., Shore D.M.;

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Description

Submitted to the EMBL Data Library, April 1996
A; Description: The sequence of 32 kb on the left arm of yeast chromosome XII reveals mily and a new ABC transporter homologous to the human multidrug resistance protein. A; Reference number: $69380
A; Accession: $69390
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       A; Molecule type: DNA

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
